ACHIEVEMENTS

❖ Awarded with rank 4 kyu for successfully completing codewars kata problems in javascript language.

❖ Got the very first milestone project in FunctionUp. **[Total 2 times]**

EDUCATION

Degree	University	Year of Passing
❖ BCA	C.S.J.M. Kanpur University	2021
❖ XII	R.S.G.U. Inter College	2018
❖ X	R.S.G.U. Inter College	2016

PROJECTS SUMMARY:

❖ BLOGGING SITE MINI PROJECT

[November-2022]

Role: Backend Developer, Tech Stack: JavaScript, NodeJs, ExpressJs, MongoDB, Git and Github.

Total 7 APIs

"Created a blog website where a registered user can write some blogs as well as update those blogs. And other users can see those blogs. Here, I used the JWT package for performing authentication and authorization in the middleware function to restrict some routes."

Inspired By: One Magazine, Medium, Quora.

❖ OPEN TO INTERN PROJECT

[November-2022]

Role: Backend Developer, Tech Stack: JavaScript, NodeJs, ExpressJs, MongoDB, Git and Github.

Total 3 APIs

"College and Companies can register their profile for users to apply for the internship and a college can check how many interns already applied for the given internship. Users can filter colleges and companies to choose which company they want to intern with."

Inspired By: Internshala, Indeed, Naukari.com.

❖ BOOKS MANAGEMENT PROJECT

[December-2022]

Role: Backend Developer, Tech Stack: JavaScript, NodeJs, ExpressJs, MongoDB, Git and Github.

Total 10 APIs

"An author can register himself and a book can be published.

Users can see the available books by filtering the books.

Users can issue a book and can give it a review and a rating between 1 to 5."

Inspired By: Library Management, Amazon Kindle, Google Play Books.

❖ URL SHORTENER

[December-2022]

Role: Backend Developer, Tech Stack: JavaScript, NodeJs, ExpressJs, MongoDB, Redis, Git and Github.

Total 2 APIs

" In this project, I use Redis and to shorten a long URL to a short URL."

Inspired By: Bitly, TinyURL.

❖ PRODUCTS MANAGEMENT

[December-2022]

Role: Backend Developer, Tech Stack: JavaScript, NodeJs, ExpressJs, MongoDB, AWS S3, Git and Github.

Total 15 APIs

"Created an eCommerce website's backend part with multiple APIs based on products, customers, carts and orders. Here, I used the JWT package for performing authentication and authorization in the middleware function to restrict some routes. Here, I also use S3 service of AWS to upload products image and to store products image URL in the database."

Inspired By: Amazon and Flipkart.

Thank You
